

# SICO Harmony Choral Risers

# 4

The innovative design of the Sico Harmony Choral Riser makes it easy to handle, quiet, and secure. The Harmony is available in both a three-tier and four-tier model.

### Easy to handle:

- Four wheel design means no lifting to transport. Everything is contained in one unit, no parts to carry or add on.

### Easy to fold:

- Transport and storage are easy for staff. One simple lifting motion makes it easy to fold up units. No disassembly required.

### One Person Operation

- Deck frames are welded aluminum to minimize weight.

- Guardrail folds down over unit and secures the risers in an upright position. Both 3 and 4 rise units will roll through a standard 36" (91cm) door.

- Carpet completely wraps tops and sides of all decks providing a quiet, acoustical asset to your performances. Carpet also eliminates the possibility of catching robes on sharp edges.

- One-inch (2.5 cm) deck-to-deck overhang reduces chances of accidents caused by heels slipping between riser tiers.

- The black frame offers an attractive appearance without reflective surfaces.

**Service:**

- Sico offers free space analysis drawings, which will provide accurate layouts for your venue with the appropriate number of choral risers.

**Specifications:**

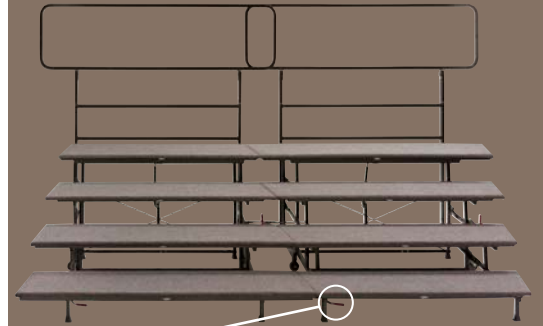

- See specifications on page 11.

- The finish, design, and carpet will add a refined, professional look to your facility.

- Both the wheels and non-marking contact feet will not scratch floors, and are quiet, even on hard floors.

- Contact feet prevent sliding of risers as performers move about.

- Unit-to-unit cam connector draws units together and locks them in place. Nothing to unbolt or unscrew for set-up or take-downs.

- Exclusive deck locks allow quick configuration changes. Nearly instantaneous change of the deck arrangement from a curved to either a straight-line set-up, or a combination of curved and straight line. No tools required for change.
